

LUIZ HENRIQUE DA SILVA DE OLIVEIRA

MID-LEVEL FULL-STACK DEVELOPER

ABOUT ME

I work as a Mid-Level Full-Stack Developer at Policorp Tecnologia, with 3+ years of professional experience developing enterprise-grade solutions and production software using: .NET, C#, PHP, C++, JavaScript, and Python. I was directly responsible for the end-to-end development of multiple Windows UWP applications with .NET for Positivo Tecnologia, from scope definition and architectural requirements through implementation, packaging, and Microsoft Store certification. These commercial applications operate in real-world production environments under rigorous quality and distribution standards. I also developed REST APIs and web platforms in ASP.NET and PHP (MVC architecture) for internal project management, significantly increasing organizational efficiency and workflow automation.

In my current position, I am also responsible for managing and maintaining CI/CD pipelines in Jenkins, configuring automated builds, running test suites, and standardizing deployment lifecycles. I configure build jobs, monitor executions, analyze pipeline failures, and optimize build performance, ensuring high reliability, traceability, and agile delivery across development and production environments.

Certified in CS50x by Harvard University, and graduated with a Bachelor's Degree in Computer Science from Universidade Positivo.

/ EDUCATION & HONORS

>> Universidade Positivo (2021 - 2024)

Bachelor of Science in Computer Science - Graduated

3rd Place in Programming Marathon

Cumulative GPA: 8.74 / 10.0

/ Certifications

- CS50x - Harvard University
- English Certificate C1 Advanced - EF SET
- Python Fundamentals for Data Analysis - Data Science Academy
- Python - FIAP
- Web Programming with JavaScript - Digital Innovation One

Location: Curitiba - PR, Brazil

/ PROFESSIONAL EXPERIENCE

>> Mid-Level Developer

Policorp Tecnologia | 2024 - Present

>> Junior Developer

Policorp Tecnologia | 2023 - 2024

>> R&D Apprentice
(Research & Development)

FiscalTech | 2022 - 2023

>> Electro-Electronics Apprentice

Volkswagen | 2019 - 2021

/ SKILLS

Languages

- C++
- C#
- JavaScript
- Python
- Java
- Kotlin
- PHP

CI-CD

- Jenkins

Messaging

- RabbitMQ

Databases

- SQL Server (Relational)
- MariaDB (Relational)
- MongoDB (NoSQL)
- SQL (Language)

Agile Methodologies

- Kanban
- Scrum

/ Key Professional Projects

Positivo Embedded Display (Minitela) - .NET, C#, C++

Actively engineered the embedded secondary display (Minitela) project in C#, developing a custom hardware-integrated sub-screen for OEM notebooks designed to: display WhatsApp notifications, manage reminders, fetch real-time weather forecasts, and monitor hardware metrics. Key tasks executed in this project:

- Responsible for repository management, branching, and version control on GitLab.
- Low-level hardware communication and protocol interpretation on the embedded display.
- C# software engineering for machine-level code conversion and weather REST API consumption.
- Leveraged native Windows APIs (Win32/UWP) to extract real-time CPU, RAM, and hardware metrics.
- Designed and maintained MySQL database schemas to persist weather cache and user reminders.

Product Reference: Positivo Vision R15M

Remote Machine Management / Caixa Econômica Federal - Python, JavaScript

Core developer on a federal government project for Caixa Econômica Federal, creating a centralized web management platform to administer and monitor enterprise network machines across Linux environments using Python and JavaScript. Primary engineering activities:

- Developed Python backend capable of waking remote computers via Wake-On-LAN (UDP magic packets), querying available package repositories for remote download, and issuing remote power commands (shutdown/reboot).
- Engineered a dynamic, responsive JavaScript frontend delivering an intuitive interface that enables administrators to wake computers remotely via Wake-on-LAN, inspect package repositories, and trigger system power cycles.

TimeControl - Team & Project Management Web Application - PHP, JavaScript, SQL

Developed an enterprise web application for team, project, and task management using JavaScript on the frontend, PHP on the backend, and MariaDB. The platform allows project managers to create projects, assign tasks to developers, and track progress in real time. Developers register logged hours, enabling real-time analytical dashboards and reports on project velocity. In this project, I was responsible for:

JavaScript (Front-end)

- DOM Manipulation & Dynamic UI
- Asynchronous Programming (fetch/AJAX)
- REST API Consumption
- Form Validation

PHP (Back-end)

- RESTful API Architecture
- Authentication & Role-Based Access Control
- Business Logic & Request Lifecycle Handling

MariaDB (Database)

- Relational Data Modeling
- Schema & Table Relationship Design
- SQL Queries (SELECT, JOIN, Transactions, Constraints)

HTML/CSS

- Responsive Semantic Page Structuring
